Subject: [External] Docket# 2020-229-E

Good afternoon,

Our world is in the end days of a climate crisis that must be attacked with every tool that we have. The current Dominion Energy South Carolina net metering tariff proposal is clearly diametrically opposed to the renewable energy future that we require. Imposing what is essentially a penalty on an energy consumer who wishes to utilize solar is criminal. Increasing the basic service charge and adding a solar subscription fee only make sense to the extent that there are actual costs incurred by Dominion as a result of the net metering entailed with solar use. They should at a minimum be required to justify the number in detail! As a South Carolina resident who wants to install solar panels on my home to move towards a sustainable future, making Dominion Energy stockholders richer does not seem fair to me. We need to crack down on the stranglehold that Dominion and Duke have on South Carolina. Reject this net metering tariff proposal and tell Dominion to go back to the drawing board.
